Project Objective

Clean Dataset

Transform raw, inconsistent data into a well-structured format.

Interactive Dashboard

Create visually appealing Power BI visualizations.

Business Insights

Deliver actionable recommendations to decision-makers.

Tools & Skills Utilized

SQL (PostgreSQL)

Data cleaning with
COALESCE(), removing
duplicates, formatting
dates.

Power BI

KPI cards, slicers, drill-
throughs, and
Bookmarks.

Excel

Initial review, pivoting,
exploratory data
analysis.

Data Storytelling

Converting numbers
into actionable
management insights.

Dataset Overview

Volume

Over 1,000 booking records analyzed.

Data Fields

Booking type, date, price, facility, class type, customer contact, status.

Data Types

Mix of dates, numeric values, and categorical fields.

Revenue Drivers

Cancellation Patterns

Peak Hours

Highest cancellation rates during busiest times.

Last-Minute

Many cancellations occur close to booking time.

New Customers

First-time bookers cancel more frequently than regulars.

Performance Variations

Facility Performance

Certain facilities consistently outperform others in both bookings and revenue.

Top performers generate 3x more revenue than bottom performers.

Instructor Impact

Popular instructors show lower cancellation rates and higher rebooking.

Instructor retention directly correlates with customer retention.

Duration Efficiency

Long-duration bookings show lower revenue per minute.

This presents a clear optimization opportunity.

Key Recommendations

Optimize Scheduling

Promote booking during underutilized time slots to reduce cancellations.

Targeted Marketing

Focus efforts on high-retention customer segments.

Loyalty Program

Offer rewards to repeat customers to enhance retention.

Service Evaluation

Investigate low-performing services to improve or replace them.

Future Directions

Predictive Churn Analysis

Identify at-risk bookings before cancellation.

Pricing Optimization

Implement dynamic pricing based on demand patterns.

Customer Segmentation

Develop deeper insights into customer behavior patterns.

Automated Reporting

Create real-time dashboards for ongoing monitoring.

Project Takeaways

This project showcased the ability to clean messy real-world data and model it effectively.
